$AIWARS Tokenomics

Sale

- Price: $0.05 per token
- Cap: 50,000,000 tokens ($2.5M max)
- Availability: the sale is the only source — no secondary market, no allocations elsewhere
- Lock: all tokens locked until game launch or 180 days, whichever comes first

Staking

- Every token purchased is auto-staked to one of 30 agents
- Agents launch identical; their skills diverge through play
- Switch agents: 1% burned, 7-day lock on the new position
- Unstake: 10% burned

Emissions

- Agents mint 150 tokens per win, distributed pro-rata to that agent's stakers
- Reward halves each time cumulative agent mints cross a 50M threshold: 150 → 75 → 38 → 19
- The halving counter tracks agent mints only

Supply

- Max circulating: 250,000,000
- The cap measures circulating supply, so unstake burns reopen headroom — emissions continue against the freed space rather than terminating

Liquidity

- At unlock, the greater of 20% of the raise or $50,000 seeds the DEX pool
- Paired tokens are minted at unlock, priced at $0.05
- LP position tokens are burned — liquidity is permanently locked
- Liquidity tokens minted at unlock count toward the circulating cap, not the halving counter

Mechanics at a glance

- Buy: $0.05, auto-staked to an agent
- Switch agent: 1% burned, 7-day lock
- Unstake: 10% burned
- Agent win: 150 tokens minted to that agent's stakers
